Profile

After taking a break from the daily grind (and 3 years working with a fast-paced SaaS startup) to explore the world of freelancing, I'm back on the market and looking for exciting and challenging opportunities that will allow me to grow as a front-end developer/designer, while also using my skills to benefit the company or team with which I work.

Experience

Lead Front-End Developer, Olition; Portland, OR – 2017-present

olition.com

UI Developer, Gambit; Portland, OR – 2016-2017

Freelance Web Development & Design – 2014-2016

Front-End Web Developer & Designer, Woobox; Vancouver, WA – 2012-2014

Worked on several projects ranging in size and importance; mainly related to the front-end and sales-related portions of the website, with some involving the dashboard/admin interface and UI/UX aspects.

Tasks included everything from updating general content on the website, to redesigning the entire site from the ground up, to creating marketing materials and advertising graphics.

Additionally, I served as a means of reference for our backend developers and founder to bounce ideas off of for new features, apps, and functionality within the platform.

As needed, I was the point person in charge of overseeing the custom projects requested by various customers (whether it be an implementation of a custom design, or a new feature to be built into the backend), from the initial contact, to the Statement of Work and contract agreements, to the assignment and completion of the project and its related tasks.

Customer Support Manager, Woobox; Vancouver, WA – 2011-2012

Worked with customers and prospective customers to explain how the apps work, troubleshooting issues that came up (whether live, past, or potential), addressing concerns of users, walking them through the setup and other pre- and post-promotion steps necessary for a successful campaign.

Additionally, I was tasked with writing up the job description for hiring new employees, reviewing and prioritizing the potential candidates, and getting the new hires set up once they arrived.

During this portion of my employment with Woobox, I was also in charge of researching and choosing a support software platform to use for our growing customer support needs, as well as setting this platform up once we decided on it.

Education

Washington State University; Pullman, WA – B.A. Marketing, 2011

Skills

HTML5, CSS3, JS, jQuery, SASS/SCSS, LESS, responsive web development, Bootstrap, Foundation, WordPress, Squarespace, PHP, Laravel, Adobe Creative Suite, project management, organization, communication (both written and verbal), copywriting, copy editing, and much more — learning things and improving every day!
